PRESS RELEASE

6 October 2015

e-SENS at ICT 2015

On 20–22 October, Lisbon will host the largest Information and Communication Technologies (ICT) event in Europe. [ICT 2015 – Innovate, Connect, Transform](#) is an initiative of the European Commission.

For three days Lisbon will be the European hub of ICT, bringing together politicians, national and European decision-makers, researchers and entrepreneurs, to debate the latest policies and initiatives of the European Commission on ICT. e-SENS is joining this exceptional event alongside e-CODEX, to present recent achievements in the delivery of cross-border digital services. Both projects have already entered the most exciting phase of real-life testing. A number of pilots are now live, to prove that European interoperability is feasible and to support the idea of the Digital Single Market.

The contributions of these Large Scale Projects during ICT 2015 will focus on showcasing the available technical solutions and piloting cases across various domains. At the joint e-SENS/e-CODEX stand, located in the “Connect” sector, visitors will be able to see live demos of cross-border digital services, learning about implementations already in place. Furthermore, technical experts will provide first-hand information on the building blocks, which can be re-used to build further interoperable e-services in various domains. On the last day, both projects will share their experiences at a networking session entitled “Have a speed date with public e-services!” The meeting will offer an excellent opportunity to gain insight into available developments in the areas of e-ID, e-Signature, e-Delivery, e-Documents and Semantics. With the interactive speed dating formula, participants will stop at three thematic tables to get a close-up view of key components for cross-border communication and learn more about their possible business value.

With over 5000 participants, ICT 2015 will attract high-level experts and successful projects. Join the discussion on European ICT, follow interesting debates, and learn about the most innovative initiatives. Do not miss the e-SENS/e-CODEX stand and session to find out about future opportunities in the area of interoperable public services.
